

A close-up photograph of a person's hands holding an old, weathered parchment map. The map is made of light brown, cracked leather and features a red star in the center, surrounded by dashed lines and arrows pointing in various directions. The person's hands are visible, with a silver ring on the left ring finger. The background is a soft, out-of-focus light blue.

Experimente im Natural Language Processing

HS Experimentelles Arbeiten in der Sprachverarbeitung

Section 1

Two Papers

Today

- ▶ Preoțiuc-Pietro et al. (2019): “Automatically Identifying Complaints in Social Media”
- ▶ Panchendrarajan et al. (2016): “Implicit Aspect Detection in Restaurant Reviews using Cooccurrence of Words”

- ▶ Which one did you like better?
- ▶ Which one was easier to understand?

Today

- ▶ Preoțiuc-Pietro et al. (2019): “Automatically Identifying Complaints in Social Media”
- ▶ Panchendrarajan et al. (2016): “Implicit Aspect Detection in Restaurant Reviews using Cooccurrence of Words”

- ▶ Which one did you like better?
- ▶ Which one was easier to understand?

- ▶ Very typical NLP papers
 - ▶ 8-9 pages, densely written
 - ▶ Structure: Abstract – Introduction – Related work – Data description/analysis – Experimental part – Conclusions – References

Today

- ▶ Preoțiu-Pietro et al. (2019): “Automatically Identifying Complaints in Social Media”
- ▶ Panchendrarajan et al. (2016): “Implicit Aspect Detection in Restaurant Reviews using Cooccurrence of Words”

- ▶ Which one did you like better?
- ▶ Which one was easier to understand?

- ▶ Very typical NLP papers
 - ▶ 8-9 pages, densely written
 - ▶ Structure: Abstract – Introduction – Related work – Data description/analysis – Experimental part – Conclusions – References
- ▶ My opinion: Preoțiu-Pietro et al. (2019) ‘better’ than Panchendrarajan et al. (2016)

Reading up on Details, Techniques, Methods

Abbreviation	Reference
MS99	Christopher D. Manning/Hinrich Schütze (1999). <i>Foundations of Statistical Natural Language Processing</i> . Cambridge, Massachusetts and London, England: MIT Press
JM19	Dan Jurafsky/James H. Martin (2019). <i>Speech and Language Processing</i> . 3rd ed. Draft of October 16, 2019. Prentice Hall

Table: References to text books

Comprehension Questions

- ▶ 10-fold cross validation
- ▶ ROC AUC
- ▶ Maximum entropy classification
- ▶ Cohen's Kappa

The Tasks

Preoțiu-Pietro et al. (2019)

- ▶ Target concept: Complaints
- ▶ Binary classification of tweets
- ▶ A tweet is positive, if it contains at least one complaint speech act
- ▶ No context dependency

The Tasks

Preoțiu-Pietro et al. (2019)

- ▶ Target concept: Complaints
- ▶ Binary classification of tweets
- ▶ A tweet is positive, if it contains at least one complaint speech act
- ▶ No context dependency

Panchendrarajan et al. (2016)

- ▶ Target concept: Mentioned and reviewed aspects
- ▶ Multi-label classification of sentences
 - ▶ Not explicitly stated by the authors
- ▶ No context dependency

The Tasks

Preoțiu-Pietro et al. (2019)

- ▶ Target concept: Complaints
- ▶ Binary classification of tweets
- ▶ A tweet is positive, if it contains at least one complaint speech act
- ▶ No context dependency

Panchendrarajan et al. (2016)

- ▶ Target concept: Mentioned and reviewed aspects
- ▶ Multi-label classification of sentences
 - ▶ Not explicitly stated by the authors
- ▶ No context dependency

Reminder: Classification

- ▶ Organize items into previously defined classes
- ▶ Multi-class: More than two classes (i.e., more than binary)
- ▶ Multi-label: Each item can get more than one label

MS99, 192,575

The Data Sets

Preoțiu-Pietro et al. (2019)

- ▶ 3449 English tweets, no retweets
 - ▶ 1971 to which support accounts replied
 - ▶ 739 @-replies
 - ▶ 739 other tweets

The Data Sets

Preoțiu-Pietro et al. (2019)

- ▶ 3449 English tweets, no retweets
 - ▶ 1971 to which support accounts replied
 - ▶ 739 @-replies
 - ▶ 739 other tweets
- ▶ Preprocessing
 - ▶ Replace all usernames
 - ▶ Replace all URLs
 - ▶ Extract unigrams

The Data Sets

Preoțiu-Pietro et al. (2019)

- ▶ 3449 English tweets, no retweets
 - ▶ 1971 to which support accounts replied
 - ▶ 739 @-replies
 - ▶ 739 other tweets
- ▶ Preprocessing
 - ▶ Replace all usernames
 - ▶ Replace all URLs
 - ▶ Extract unigrams
- ▶ Annotation
 - ▶ Two independent annotators
 - ▶ Agreement $\kappa = 0.731$ (Cohen, 1960)

The Data Sets

Preoțiu-Pietro et al. (2019)

- ▶ 3449 English tweets, no retweets
 - ▶ 1971 to which support accounts replied
 - ▶ 739 @-replies
 - ▶ 739 other tweets
- ▶ Preprocessing
 - ▶ Replace all usernames
 - ▶ Replace all URLs
 - ▶ Extract unigrams
- ▶ Annotation
 - ▶ Two independent annotators
 - ▶ Agreement $\kappa = 0.731$ (Cohen, 1960)

Panchendrarajan et al. (2016)

- ▶ 1000 restaurant reviews from Yelp

The Data Sets

Preoțiu-Pietro et al. (2019)

- ▶ 3449 English tweets, no retweets
 - ▶ 1971 to which support accounts replied
 - ▶ 739 @-replies
 - ▶ 739 other tweets
- ▶ Preprocessing
 - ▶ Replace all usernames
 - ▶ Replace all URLs
 - ▶ Extract unigrams
- ▶ Annotation
 - ▶ Two independent annotators
 - ▶ Agreement $\kappa = 0.731$ (Cohen, 1960)

Panchendrarajan et al. (2016)

- ▶ 1000 restaurant reviews from Yelp
- ▶ Annotation (p. 135)
 - ▶ Two independent annotators on 3 samples of 100 reviews
 - ▶ Sentence-wise annotation
 - ▶ Agreement $\kappa = 0.834$ (Cohen, 1960)

The Data Sets

Preoțiu-Pietro et al. (2019)

- ▶ 3449 English tweets, no retweets
 - ▶ 1971 to which support accounts replied
 - ▶ 739 @-replies
 - ▶ 739 other tweets
- ▶ Preprocessing
 - ▶ Replace all usernames
 - ▶ Replace all URLs
 - ▶ Extract unigrams
- ▶ Annotation
 - ▶ Two independent annotators
 - ▶ Agreement $\kappa = 0.731$ (Cohen, 1960)

Panchendrarajan et al. (2016)

- ▶ 1000 restaurant reviews from Yelp
- ▶ Annotation (p. 135)
 - ▶ Two independent annotators on 3 samples of 100 reviews
 - ▶ Sentence-wise annotation
 - ▶ Agreement $\kappa = 0.834$ (Cohen, 1960)
- ▶ Highly skewed distribution (Most sentences do not contain implicit aspects)

Experimental Setup

Preoțiuc-Pietro et al. (2019)

- ▶ 10-fold cross validation JM19, 69
- ▶ Parameters: 3-fold CV in inner loop

Experimental Setup

Preoțiu-Pietro et al. (2019)

- ▶ 10-fold cross validation JM19, 69
- ▶ Parameters: 3-fold CV in inner loop
- ▶ Evaluation
 - ▶ Mean accuracy
 - ▶ F1 (macro-average)
 - ▶ ROC AUC MS99, 270
 - ▶ (ROC = receiver operating characteristic curve / AUC = area under curve)

Experimental Setup

Preoțiu-Pietro et al. (2019)

- ▶ 10-fold cross validation JM19, 69
- ▶ Parameters: 3-fold CV in inner loop
- ▶ Evaluation
 - ▶ Mean accuracy
 - ▶ F1 (macro-average)
 - ▶ ROC AUC MS99, 270
 - ▶ (ROC = receiver operating characteristic curve / AUC = area under curve)

Panchendrarajan et al. (2016)

- ▶ 10-fold cross validation JM19, 69
- ▶ Additional 400 reviews used for testing M1

Experimental Setup

Preoțiu-Pietro et al. (2019)

- ▶ 10-fold cross validation JM19, 69
- ▶ Parameters: 3-fold CV in inner loop
- ▶ Evaluation
 - ▶ Mean accuracy
 - ▶ F1 (macro-average)
 - ▶ ROC AUC MS99, 270
 - ▶ (ROC = receiver operating characteristic curve / AUC = area under curve)

Panchendrarajan et al. (2016)

- ▶ 10-fold cross validation JM19, 69
- ▶ Additional 400 reviews used for testing M1
- ▶ Evaluation
 - ▶ Precision/recall/F1 MS99, 267 ff.

Preprocessing

Processing steps before actual task solving

Preoțiu-Pietro et al. (2019)

- ▶ Part of speech
- ▶ Sentiment
- ▶ Request detection
- ▶ Politeness
- ▶ Time expressions

Preprocessing

Processing steps before actual task solving

Preoțiu-Pietro et al. (2019)

- ▶ Part of speech
- ▶ Sentiment
- ▶ Request detection
- ▶ Politeness
- ▶ Time expressions
- ▶ Word2vec

Preprocessing

Processing steps before actual task solving

Preoțiu-Pietro et al. (2019)

- ▶ Part of speech
- ▶ Sentiment
- ▶ Request detection
- ▶ Politeness
- ▶ Time expressions
- ▶ Word2vec
- ▶ Rule-based ad-hoc systems
 - ▶ Intensifiers
 - ▶ Pronoun types
 - ▶ LIWC

Preprocessing

Processing steps before actual task solving

Preoțiu-Pietro et al. (2019)

- ▶ Part of speech
- ▶ Sentiment
- ▶ Request detection
- ▶ Politeness
- ▶ Time expressions
- ▶ Word2vec
- ▶ Rule-based ad-hoc systems
 - ▶ Intensifiers
 - ▶ Pronoun types
 - ▶ LIWC

Panchendrarajan et al. (2016)

- ▶ Dependency relations
 - ▶ Which one?

Preprocessing

Processing steps before actual task solving

Preoțiu-Pietro et al. (2019)

- ▶ Part of speech
- ▶ Sentiment
- ▶ Request detection
- ▶ Politeness
- ▶ Time expressions
- ▶ Word2vec
- ▶ Rule-based ad-hoc systems
 - ▶ Intensifiers
 - ▶ Pronoun types
 - ▶ LIWC

Panchendrarajan et al. (2016)

- ▶ Dependency relations
 - ▶ Which one?

Pre-Processing

- ▶ No global definition of what counts as pre-processing
- ▶ Context-dependent

Methods

Preoțiuc-Pietro et al. (2019)

- ▶ Baseline: Most frequent class

Methods

Preoțiu-Pietro et al. (2019)

- ▶ Baseline: Most frequent class
- ▶ Logistic regression with manually specified features JM19, 75 ff.

Methods

Preoțiu-Pietro et al. (2019)

- ▶ Baseline: Most frequent class
- ▶ Logistic regression with manually specified features JM19, 75 ff.
- ▶ Neural networks with one-hot-encoded word vectors as input
 - ▶ MLP: Feedforward neural network JM19, 129 ff.
 - ▶ LSTM: Sequential classifier (word by word) JM19, 184 ff.

Methods

Preoțiu-Pietro et al. (2019)

- ▶ Baseline: Most frequent class
- ▶ Logistic regression with manually specified features JM19, 75 ff.
- ▶ Neural networks with one-hot-encoded word vectors as input
 - ▶ MLP: Feedforward neural network JM19, 129 ff.
 - ▶ LSTM: Sequential classifier (word by word) JM19, 184 ff.

Panchendrarajan et al. (2016)

- ▶ M1 (for explicit aspects): Maximum entropy classifier with n-grams as features ($2 \leq n \leq 5$) = Logistic regression JM19, 75 ff.

Methods

Preoțiu-Pietro et al. (2019)

- ▶ Baseline: Most frequent class
- ▶ Logistic regression with manually specified features JM19, 75 ff.
- ▶ Neural networks with one-hot-encoded word vectors as input
 - ▶ MLP: Feedforward neural network JM19, 129 ff.
 - ▶ LSTM: Sequential classifier (word by word) JM19, 184 ff.

Panchendrarajan et al. (2016)

- ▶ M1 (for explicit aspects): Maximum entropy classifier with n-grams as features ($2 \leq n \leq 5$)
= Logistic regression JM19, 75 ff.
- ▶ M2 (for implicit aspects)
 - ▶ Training: Collect dictionary (called 'model' by the authors)
 - ▶ Testing
 1. Generate candidates, based on score A_i (Eq. 1)
 2. Remove candidates according to rules (Fig. 1)
 - ▶ Modification 1 and 2 (p. 133)

Summary

- ▶ Typical NLP papers: Focus in methods
- ▶ Complaints
 - ▶ Very clear
 - ▶ Classical machine learning wins
- ▶ Reviews
 - ▶ Implicit aspects in restaurant reviews
 - ▶ Machine learning and rules on top
