

Machine Learning, part 1

Einführung in die Informationsverarbeitung

Nils Reiter

January 13, 2023

Machine Learning Basics

Introduction

- ▶ What is machine learning?
 - ▶ Method to find patterns, hidden structures and undetected relations in data

Introduction

- ▶ What is machine learning?
 - ▶ Method to find patterns, hidden structures and undetected relations in data
- ▶ It's all around us
 - ▶ Stock market transactions
 - ▶ Search engines
 - ▶ Surveillance
 - ▶ Data-driven research & science
 - ▶ ...

Introduction

- ▶ What is machine learning?
 - ▶ Method to find patterns, hidden structures and undetected relations in data
- ▶ It's all around us
 - ▶ Stock market transactions
 - ▶ Search engines
 - ▶ Surveillance
 - ▶ Data-driven research & science
 - ▶ ...
- ▶ Why is it interesting for text analysis?
 - ▶ Big data analyses
 - ▶ Automatic prediction of phenomena
 - ▶ Canonisation, Euro-centrism
 - ▶ Statements about 1000 texts more convincing than abt 10
 - ▶ Insights into data
 - ▶ By inspecting features and making error analysis

Two Parts

Prediction Model

How do we make predictions on data instances?

(e.g., how do we assign a part of speech tag for a word?)

Learning Algorithm

How do we create a prediction model, given annotated data?

(e.g. how do we create rules for assigning a part of speech tag for a word?)

Two Parts

Prediction Model

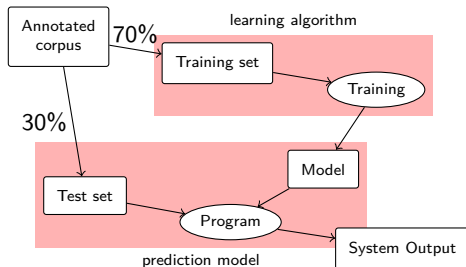

How do we make predictions on data instances?

(e.g., how do we assign a part of speech tag for a word?)

Learning Algorithm

How do we create a prediction model, given annotated data?

(e.g. how do we create rules for assigning a part of speech tag for a word?)

Classification

- ▶ Assigning *classes* to *objects/instances/items*

Classification

- ▶ Assigning *classes* to *objects/instances/items*
 - ▶ Words → parts of speech

Classification

- ▶ Assigning *classes* to *objects/instances/items*
 - ▶ Words → parts of speech
 - ▶ Texts → genres

Classification

- ▶ Assigning *classes* to *objects/instances/items*
 - ▶ Words → parts of speech
 - ▶ Texts → genres
 - ▶ Portrait photos → name of depicted person

Classification

- ▶ Assigning *classes* to *objects/instances/items*
 - ▶ Words → parts of speech
 - ▶ Texts → genres
 - ▶ ~~Portrait photos → name of depicted person~~

Classification

- ▶ Assigning *classes* to *objects/instances/items*
 - ▶ Words → parts of speech
 - ▶ Texts → genres
 - ▶ ~~Portrait photos → name of depicted person~~
- ▶ Prediction model: Responsible for the classification

Classification

- ▶ Assigning *classes* to *objects/instances/items*
 - ▶ Words → parts of speech
 - ▶ Texts → genres
 - ▶ ~~Portrait photos → name of depicted person~~
- ▶ Prediction model: Responsible for the classification
- ▶ Many different models/algorithms available (all with variants):
 - ▶ Decision trees
 - ▶ Support vector machines
 - ▶ Naïve bayes
 - ▶ Neural networks
 - ▶ Bayesian networks
 - ▶ ...

Classification

Target classes

Classes: A finite set of categories

Examples

- ▶ Parts of speech: Noun, verb, adjective, ...
 - ▶ E.g., STTS tagset
- ▶ Genres: Abenteuerroman, Bildungsroman, Kriminalroman, ...
 - ▶ Many novels fall in multiple classes

Classification

Target classes

Classes: A finite set of categories

Examples

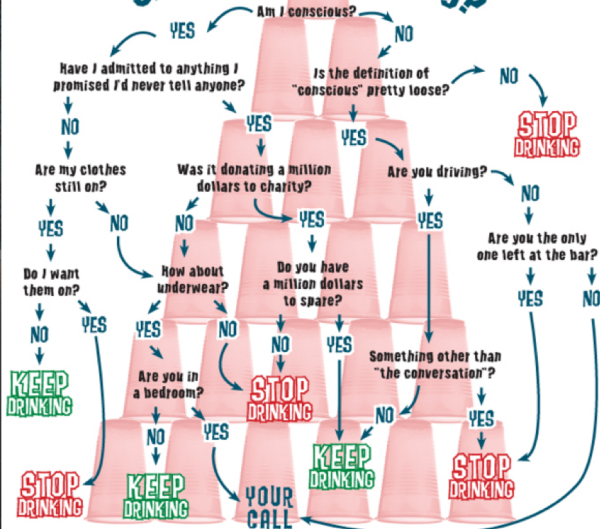

- ▶ Parts of speech: Noun, verb, adjective, ...
 - ▶ E.g., STTS tagset
- ▶ Genres: Abenteuerroman, Bildungsroman, Kriminalroman, ...
 - ▶ Many novels fall in multiple classes

Important first step: Clearly identify classes and problem properties

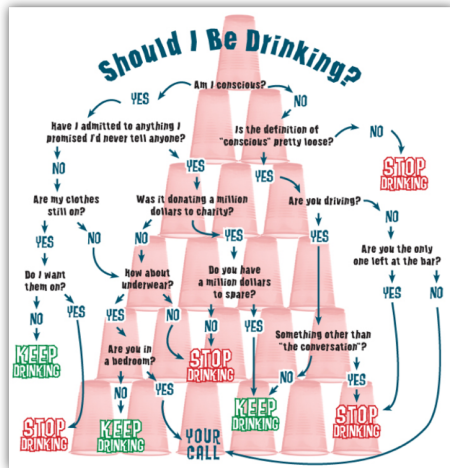

Decision Trees

Should I Be Drinking?

Decision Trees

Prediction Model – Toy Example

- ▶ What are the instances?
 - ▶ Situations we are in (this is not really automatisable)

Decision Trees

Prediction Model – Toy Example

- ▶ What are the instances?
 - ▶ Situations we are in (this is not really automatisable)
- ▶ What are the features?
 - ▶ Consciousness
 - ▶ Clothing situation
 - ▶ Promises made
 - ▶ Whether we are driving
 - ▶ ...

Decision Trees

Prediction Model

- ▶ Each non-leaf node in the tree represents one feature
- ▶ Each leaf node represents a class label
- ▶ Each branch at this node represents one possible feature value
 - ▶ Number of branches = number of possible values

Decision Trees

Prediction Model

- ▶ Each non-leaf node in the tree represents one feature
- ▶ Each leaf node represents a class label
- ▶ Each branch at this node represents one possible feature value
 - ▶ Number of branches = number of possible values
- ▶ Make a prediction for x :
 1. Start at root node
 2. If it's a leaf node
 - ▶ assign the class label
 3. Else
 - ▶ Check node which feature is to be tested (f_i)
 - ▶ Extract $f_i(x)$
 - ▶ Follow corresponding branch
 - ▶ Go to 2

Decision Trees

Learning Algorithm (Quinlan 1986)

- ▶ Core idea: The tree represents splits of the training data
 1. Start with the full data set D_{train} as D
 2. If D only contains members of a single class:
 - ▶ Done.
 3. Else:
 - ▶ Select a feature f_i
 - ▶ Extract feature values of all instances in D
 - ▶ Split the data set according to f_i : $D = D_v \cup D_w \cup D_u \dots$
 - ▶ Go back to 2

Decision Trees

Learning Algorithm (Quinlan 1986)

- ▶ Core idea: The tree represents splits of the training data
 1. Start with the full data set D_{train} as D
 2. If D only contains members of a single class:
 - ▶ Done.
 3. Else:
 - ▶ Select a feature f_i
 - ▶ Extract feature values of all instances in D
 - ▶ Split the data set according to f_i : $D = D_v \cup D_w \cup D_u \dots$
 - ▶ Go back to 2

- ▶ Remaining question: How to select features?

Decision Trees

Feature Selection

- ▶ What is a good feature?
 - ▶ One that maximizes homogeneity in the split data set

Decision Trees

Feature Selection

- ▶ What is a good feature?
 - ▶ One that maximizes homogeneity in the split data set
- ▶ “Homogeneity”
 - ▶ Increase
$$\{\checkmark\checkmark\checkmark\mathbf{x}\} = \{\mathbf{x}\} \cup \{\checkmark\checkmark\checkmark\}$$
 - ▶ No increase
$$\{\checkmark\checkmark\checkmark\mathbf{x}\} = \{\checkmark\} \cup \{\checkmark\checkmark\mathbf{x}\}$$

Decision Trees

Feature Selection

- ▶ What is a good feature?
 - ▶ One that maximizes homogeneity in the split data set
- ▶ “Homogeneity”
 - ▶ Increase
 - $\{\checkmark\checkmark\checkmark\mathbf{x}\} = \{\mathbf{x}\} \cup \{\checkmark\checkmark\checkmark\} \leftarrow$ better split!
 - ▶ No increase
 - $\{\checkmark\checkmark\checkmark\mathbf{x}\} = \{\checkmark\} \cup \{\checkmark\checkmark\mathbf{x}\}$
- ▶ Homogeneity: Entropy/information

Shannon (1948)

Decision Trees

Feature Selection

- ▶ What is a good feature?
 - ▶ One that maximizes homogeneity in the split data set
- ▶ “Homogeneity”
 - ▶ Increase
 - $\{\checkmark\checkmark\checkmark\mathbf{x}\} = \{\mathbf{x}\} \cup \{\checkmark\checkmark\checkmark\} \leftarrow$ better split!
 - ▶ No increase
 - $\{\checkmark\checkmark\checkmark\mathbf{x}\} = \{\checkmark\} \cup \{\checkmark\checkmark\mathbf{x}\}$
- ▶ Homogeneity: Entropy/information
- ▶ Rule: Always select the feature with the highest *information gain* (IG)
 - ▶ (= the highest reduction in entropy = the highest increase in homogeneity)

Shannon (1948)

Entropy

Shannon (1948)

$$H(X) = - \sum_{i=1}^n p(x_i) \log_b p(x_i)$$

number of classes present in X

relative frequency of the class

entropy

- ▶ A metric for the uncertainty in a random variable

Entropy

Example

- ▶ How certain are we in predicting the next value?
 - ▶ »aaaaaaaaaaaa« – only one symbol, very certain

Entropy

Example

- ▶ How certain are we in predicting the next value?
 - ▶ »aaaaaaaaaaaaa« – only one symbol, very certain
 - ▶ $H = -\sum_1^1 p(a) \log_2 p(a) = -1 \log_2 1 = 0$

Entropy

Example

- ▶ How certain are we in predicting the next value?
 - ▶ »aaaaaaaaaaaaa« – only one symbol, very certain
 - ▶ $H = -\sum_1^1 p(a) \log_2 p(a) = -1 \log_2 1 = 0$
 - ▶ »abbaabbabbaaba« – two symbols, evenly distributed, 50:50

Entropy

Example

- ▶ How certain are we in predicting the next value?
 - ▶ »aaaaaaaaaaaaa« – only one symbol, very certain
 - ▶ $H = -\sum_1^1 p(a) \log_2 p(a) = -1 \log_2 1 = 0$
 - ▶ »abbaabbabbaaba« – two symbols, evenly distributed, 50:50
 - ▶ $H = -(p(a) \log_2 p(a) + p(b) \log_2 p(b)) = ((0.5 \times -1) + (0.5 \times -1)) = 1$

Entropy

Example

- ▶ How certain are we in predicting the next value?
 - ▶ »aaaaaaaaaaaaa« – only one symbol, very certain
 - ▶ $H = -\sum_1^1 p(a) \log_2 p(a) = -1 \log_2 1 = 0$
 - ▶ »abbaabbabbaaba« – two symbols, evenly distributed, 50:50
 - ▶ $H = -(p(a) \log_2 p(a) + p(b) \log_2 p(b)) = ((0.5 \times -1) + (0.5 \times -1)) = 1$
 - ▶ »bbabbababbbaba« – two symbols, unevenly distributed, 33:66

Entropy

Example

- ▶ How certain are we in predicting the next value?
 - ▶ »aaaaaaaaaaaaa« – only one symbol, very certain
 - ▶ $H = -\sum_1^1 p(a) \log_2 p(a) = -1 \log_2 1 = 0$
 - ▶ »abbaabbabbaaba« – two symbols, evenly distributed, 50:50
 - ▶ $H = -(p(a) \log_2 p(a) + p(b) \log_2 p(b)) = ((0.5 \times -1) + (0.5 \times -1)) = 1$
 - ▶ »bbabbababbbaba« – two symbols, unevenly distributed, 33:66
 - ▶ $H = -(0.333 \log_2 0.333 + 0.666 \log_2 0.666) = 0.91$

Entropy

Example

- ▶ How certain are we in predicting the next value?
 - ▶ »aaaaaaaaaaaaaaaa« – only one symbol, very certain
 - ▶ $H = - \sum_1^1 p(a) \log_2 p(a) = -1 \log_2 1 = 0$
 - ▶ »abbaabbabbaaba« – two symbols, evenly distributed, 50:50
 - ▶ $H = - (p(a) \log_2 p(a) + p(b) \log_2 p(b)) = ((0.5 \times -1) + (0.5 \times -1)) = 1$
 - ▶ »bbabbababbbaba« – two symbols, unevenly distributed, 33:66
 - ▶ $H = - (0.333 \log_2 0.333 + 0.666 \log_2 0.666) = 0.91$
 - ▶ »nmkfjigeoahlpdcb« – 16 symbols, very uncertain

Entropy

Example

- ▶ How certain are we in predicting the next value?
 - ▶ »aaaaaaaaaaaaaaaa« – only one symbol, very certain
 - ▶ $H = -\sum_1^1 p(a) \log_2 p(a) = -1 \log_2 1 = 0$
 - ▶ »abbaabbabbaaba« – two symbols, evenly distributed, 50:50
 - ▶ $H = -(p(a) \log_2 p(a) + p(b) \log_2 p(b)) = ((0.5 \times -1) + (0.5 \times -1)) = 1$
 - ▶ »bbabbababbbaba« – two symbols, unevenly distributed, 33:66
 - ▶ $H = -(0.333 \log_2 0.333 + 0.666 \log_2 0.666) = 0.91$
 - ▶ »nmkfjigeoahlpdcb« – 16 symbols, very uncertain
 - ▶ $H = -16 \times -0.25 = 4$

Entropy

Example

- ▶ How certain are we in predicting the next value?
 - ▶ »aaaaaaaaaaaaa« – only one symbol, very certain
 - ▶ $H = -\sum_1^1 p(a) \log_2 p(a) = -1 \log_2 1 = 0$
 - ▶ »abbaabbabbaaba« – two symbols, evenly distributed, 50:50
 - ▶ $H = -(p(a) \log_2 p(a) + p(b) \log_2 p(b)) = ((0.5 \times -1) + (0.5 \times -1)) = 1$
 - ▶ »bbabbababbbaba« – two symbols, unevenly distributed, 33:66
 - ▶ $H = -(0.333 \log_2 0.333 + 0.666 \log_2 0.666) = 0.91$
 - ▶ »nmkbfjigeoahlpdcb« – 16 symbols, very uncertain
 - ▶ $H = -16 \times -0.25 = 4$
- ▶ Interpretation: We need $H(X)$ bits to encode the next symbol

Entropy

Application

- ▶ Data Representation: How to represent the text »abca« in memory?
- ▶ Variant 1: Three states to distinguish
 - ▶ $a = \begin{array}{|c|c|} \hline 0 & 0 \\ \hline \end{array}$, $b = \begin{array}{|c|c|} \hline 0 & 1 \\ \hline \end{array}$, $c = \begin{array}{|c|c|} \hline 1 & 0 \\ \hline \end{array}$
 - ▶ Memory consumption: 2 bits per character

Entropy

Application

- ▶ Data Representation: How to represent the text »abca« in memory?
- ▶ Variant 1: Three states to distinguish
 - ▶ $a = \begin{bmatrix} 0 & 0 \end{bmatrix}$, $b = \begin{bmatrix} 0 & 1 \end{bmatrix}$, $c = \begin{bmatrix} 1 & 0 \end{bmatrix}$
 - ▶ Memory consumption: 2 bits per character
- ▶ Variant 2: Some symbols are more frequent than the others!
 - ▶ $a = \begin{bmatrix} 0 \end{bmatrix}$, $b = \begin{bmatrix} 1 & 0 \end{bmatrix}$, $c = \begin{bmatrix} 1 & 1 \end{bmatrix}$
 - ▶ Memory consumption: 1.5 bits per character
 - ▶ This is the entropy of »abca« – the minimal memory consumption

Decision Trees

$$H(X) = - \sum_{i=1}^n p(x_i) \log_b p(x_i)$$

Examples (with $b = 2$)

$$\blacktriangleright H(\{\checkmark\checkmark\checkmark\checkmark\}) = -\frac{4}{4} \log_2 \frac{4}{4} = 0$$

$$\blacktriangleright H(\{\checkmark\checkmark\checkmark\times\}) = - \left(\underbrace{\frac{3}{4} \log_2 \frac{3}{4}}_{\checkmark} + \underbrace{\frac{1}{4} \log_2 \frac{1}{4}}_{\times} \right) = 0.562$$

$$\blacktriangleright H(\{\checkmark\checkmark\times\times\}) = \dots = 0.693$$

Decision Trees

Feature Selection (2)

$$\begin{aligned}
 H(\{\checkmark\checkmark\checkmark\mathbf{x}\}) &= H([3, 1]) \\
 &= 0.562 \\
 H(\{\mathbf{x}\}) &= H([1]) = 0 \\
 H(\{\checkmark\checkmark\checkmark\}) &= H([3]) \\
 &= 0
 \end{aligned}$$

$$\begin{aligned}
 H(\{\checkmark\checkmark\checkmark\mathbf{x}\}) &= H([3, 1]) \\
 &= 0.562 \\
 H(\{\checkmark\}) &= H([1]) = 0 \\
 H(\{\checkmark\checkmark\mathbf{x}\}) &= H([2, 1]) \\
 &= 0.637
 \end{aligned}$$

Decision Trees

Feature Selection (3)

$$H(\{\checkmark\checkmark\checkmark\mathbf{x}\}) = 0.562$$

$$H(\{\mathbf{x}\}) = 0$$

$$H(\{\checkmark\checkmark\checkmark\}) = 0$$

$$H(\{\checkmark\checkmark\checkmark\mathbf{x}\}) = 0.562$$

$$H(\{\checkmark\}) = 0$$

$$H(\{\checkmark\checkmark\mathbf{x}\}) = 0.637$$

$$\begin{aligned} IG(f_1) &= H(\{\checkmark\checkmark\checkmark\mathbf{x}\}) - \varnothing (H(\{\mathbf{x}\}), H(\{\checkmark\checkmark\checkmark\})) \\ &= 0.562 - 0 = 0.562 \end{aligned}$$

$$\begin{aligned} IG(f_2) &= H(\{\checkmark\checkmark\checkmark\mathbf{x}\}) - \varnothing (H(\{\checkmark\}), H(\{\checkmark\checkmark\mathbf{x}\})) \\ &= 0.562 - \left(\frac{3}{4} \cdot 0.637 + \frac{1}{4} \cdot 0\right) \\ &= 0.562 - 0.562 - 0.477 = 0.085 \end{aligned}$$

- ▶ Models for many different languages
 - ▶ Including middle High German by Echelmeyer et al. (2017)

Example: TreeTagger

Helmut Schmid. »Probabilistic part-of-speech tagging using decision trees«. In: *Proceedings of the conference on New Methods in Language Processing 12* (1994)

- ▶ Web page: <https://www.cis.uni-muenchen.de/~schmid/tools/TreeTagger/>
- ▶ Models for many different languages
 - ▶ Including middle High German by Echelmeyer et al. (2017)
- ▶ Lexicon to provide candidates (and probabilities)
- ▶ Previous two pos tags as features for a decision tree

Summary

Decision Tree

- ▶ Classification algorithm
- ▶ Built around trees, recursive learning and prediction
- ▶ Pros
 - ▶ Highly transparent (if the number of features is not very large)
 - ▶ Reasonably fast
 - ▶ Dependencies between features can be incorporated into the model
- ▶ Cons
 - ▶ No pairwise dependencies
 - ▶ May lead to overfitting
 - ▶ Only nominal features
- ▶ Variants exist
