Exercise 4 – Reference Solution
Sprachverarbeitung (VL + Ü)

Nils Reiter, nils.reiter@uni-koeln.de

April 18, 2023 (Summer term 2023)

- Launch a tmux session
  - `tmux` to launch a new session, `tmux at` to attach yourself to an existing sessions.

- Copy the file `/teaching/summer-2023/sprachverarbeitung/training.py` into your directory (`sprachverarbeitung`)
  - `cp /teaching/summer-2023/sprachverarbeitung/training.py ~/sprachverarbeitung/`

- Train the model, note down it's performance
  - `python3 training.py`

- Increase the number of numbers to compare, and let it run again
  - For this, you'll need to edit the file `training.py`
  - `nano training.py` launches the nano text editor. Press `ctrl` `X` to exit. If you made changes you'll be asked whether they should be saved.

- Play around with the other parameters
  - This is a cycle of making small changes to the file `training.py`, running the training script and wait. After it's finished, note down the results, and make small changes again.
